

This photomosaic was compiled from a special set of images taken by the Viking Orbiter 2 spacecraft during orbital revolution 560, when the solar planetocentric longitude with respect to Mars was approximately 53°. Images taken during this period show topographic features covered with less ice and frost than those in images used to make sheet 1.

NOTE TO USERS
Users noting errors or omissions are urged to indicate them on the map and to forward it to U.S. Geological Survey, Building 4, Room 454, 2255 North Gemini Drive, Flagstaff, Arizona 86001. A replacement copy will be returned.

MTM 80050
CONTROLLED PHOTOMOSAIC OF PART OF THE CHASMA
BOREALE REGION OF MARS
"SPRING"
M 500K 80/50 CM
1986

Prepared on behalf of the Planetary Geology Program, Planetary Division, Office of Space Science, National Aeronautics and Space Administration, under contract W-13.709.
